

### Simplified Protein Folding

**Directions:**

- **Cut out the three strips below** (you do not need to cut out the little notches in-between the squares...unless you are a glutton for punishment)
- **Tape the three strips together to make one long strip** (*place the square on one left end of one strip on top of the square on the right end of the other strip*)
- **Bring the taped together strips to class** where you will receive further instructions.
